

FEP Practical Exercise 1—Instructions

Oblique fracture

Step 1: insert lag screw - test stability

Step 2: add neutralization plate - test stability and compare to previous model- take all out

Step 3 (optional): put plate on with lag screw through plate- test stability and compare to previous models

FEP Practical Exercise 2—Instructions

Comparing non-DCP plate to a dynamic compression plate in a transverse fracture

Step 1: apply non-DCP to transverse fracture

Step 2: apply DCP to transverse fracture

Step 3: compare stability of the two constructs
